Welcome Message from our President

Happy Fall! It's been another productive and rewarding quarter at Technology for Tomorrow. Over the past few months, we've reached **568** participants through **28** classes, bringing our year-to-date total to **2,350** participants across **159** classes. Beyond the numbers, what's been especially rewarding is seeing the wide range of people we've had the opportunity to work with, each bringing their own experiences, challenges, and goals. It's a reminder of just how many different ways digital literacy can make a meaningful difference in people's lives.

A highlight of the quarter was hosting our 3rd annual Digital Equity and Access Roundtable (DEARvt), where we brought together partners and community members from across Vermont to explore ways to reduce the digital divide. Our conversations around AI, cybersecurity, and the future of digital equity reinforced the importance of collaboration and keeping the needs of our communities at the center of our work.

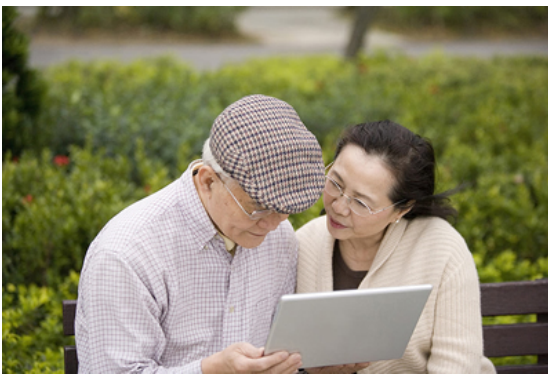

As always, we're grateful for the continued support of our partners and community, and look forward to building on this momentum as we close out the year.

Neel Desai, T4T Founder and Board President

Quarterly Impact

Quarter 3 Metrics

As of October 1st, 2026, we have served **568** participants across **28** events, including workshops, webinars, and class series. These include **59** New Americans, **5**

individuals seeking employment, and **105** Older Adults.

In 2025, we served more than 4,100 students across the entirety of the United States of America.

You can read about this and more in our [2025 Impact Report](#).

Partner Testimonials

At Chittenden Regional Correctional Facility, we were grateful to have Maliki LaForce here to provide an informative and engaging workshop about tips for the online job search process. Maliki himself was open-minded, passionate, and clearly knowledgeable about the subject matter.

The participants especially enjoyed learning about the reality of job scams, and the content he shared will truly help individuals protect themselves as they transition back to the community. Overall, the team at Technology for Tomorrow is true to their mission and is overwhelmingly dedicated to helping those within society grow in their technological skills.

Emma Koepke, Workforce Development Coordinator,
Chittenden Regional Correctional Facility

Program & Partnership Updates

Digital Equity & Access Roundtable 2026

Our theme for last month's DEARvt conference was "Reducing the Gap" in regards to digital equity, and we were fortunate to hear from keynote speakers Kristen Christopher from [Comcast](#) and Erin Moore from [Lead for America](#), who both spoke on the value that digital inclusion and equity training provides for communities.

We explored our theme through large group discussions and breakout rooms with topics focused around Cybersecurity, AI and Tools, and Funding and Sustainability, and how these different topics affect ourselves and the communities that we serve. As we moved into breakout rooms, we asked ourselves three questions to guide our discussions: Where are we now? Where do we want to be? How do we get there?

While there is a lot of uncertainty across the digital landscape—in terms of how to use the tools available to us, or what funding resources are available, or how to stay safe online—our discussions provided us a space to connect with one another and examine how we can face such challenges together.

We extend our heartfelt thanks to all of our attendees for joining us, and for their thoughtful contributions, and also thank the [South Burlington Public Library](#) for the use of their space.

Comcast Digital Navigation Program 2026

Thanks to the continued generous support of our partners at [Comcast](#), we are able to fund six digital navigation class series with an array of community partners. Some of these programs began this quarter, while others will commence as we move into Q4. Thanks to Comcast, we are able to provide classes free of charge to the [School for International Training \(SIT\)](#); [Champlain Valley Office of Economic Opportunity \(CVOEO\)](#); [Winooski](#)

High School; Burlington Parent University (BPU); The Janet S. Munt Family Room; and Cathedral Square.

Though our specific topics are catered to each organizations' needs, every series is focused on working directly with participants, as well as providing assistance to staff and trainers to ensure that participants have the resources they need to further develop their digital navigation skills. We're incredibly grateful for this support from Comcast, and are excited to keep connecting with community members as we work with them across these series!

AARP 2026 Tech Thursdays

We've continued our series with [AARP](#) throughout this quarter, covering topics designed to help participants get the most out of their travels and more! Our Google Translate seminar highlighted how to use the application with a variety of different inputs, ranging from text to images and even to websites, which gives travelers a variety of skills that they can call upon while visiting new places. We also offered a seminar on Google Photos, where we showcased both basic usage and more advanced features, like simple photo editing and album organization, to help users preserve memories in the digital age.

To round out our series this quarter, we covered accessibility settings for Android phones and iPhones. These seminars focused on ways users can make their phones easier to navigate, be that by enlarging text, utilizing the magnifying glass feature, or changing the brightness or contrast of displays, amidst other settings.

BPU & The Family Room

This quarter also marks our return to [Burlington Parent University \(BPU\)](#) and [The Janet S. Munt Family Room](#)! We've brought back our Tech Thursday classes, where community members can drop by for tech assistance surrounding a particular topic. So far, we've covered password management and how users can set up digital password managers to both save their passwords and keep them secure.

These classes are a great combination of instruction and application, and allow participants to practice their digital skills with the support of an instructor. We're looking forward to continuing these classes throughout the rest of 2026.

SENIOR PLANET

FROM ~~AARP~~

Senior Planet Classes

Thanks to our continued partnership and licensing agreement with [Senior Planet](#), we were able to utilize their course materials for our series with [Williston Recreation and Parks](#) as well as with the [Central Vermont Council on Aging \(CVCOA\)](#). Our four classes with Williston Park & Rec covered topics of tech support and accessibility, telemedicine, and general scam prevention. These classes were served in-person and offered participants both general information and the opportunity to get more personalized assistance with the topics.

Our series with CVCOA was geared towards computer and smartphone usage, as well as introductory classes covering the internet, AI, and how to protect your personal information online. This series was a great way to connect with community members outside of the Greater Burlington area, and provide participants with key skills necessary for navigating life in our increasingly digital age.

Partners and Grantors

We'd like to thank our community partners and grantors for their continued support. It is with their assistance that we are able to build

foundations and help strengthen our community through bridging the digital divide.
